### 1 INTRODUCTION

### 1.1 SCOPE

The scope of this document is to provide a clear understanding of the activities performed for the certification testing of HID Global's Android-based mDL Application and version - goID Starter App Version 1.0.2.5. This Test Report document includes information about the validation results along with observations drawn from the test activities.

UL conducted Functional Certification testing against the ISO/IEC 18013-5:2021 standard, where the System Under Test (SUT) is the mDL application and its interface to the mDL reader (see area 1.1 in Figure 1 below). This Certification Test Report intends to provide HID Global with an overview of the test activities and the resultant outcomes.

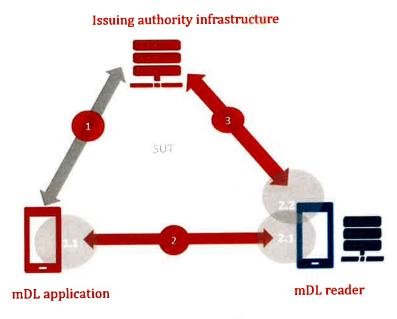

Figure 1: mDL System Under Test

#### 1.2 DOCUMENT STRUCTURE

The certification test report document follows the below structure.

- Section 1 provides details on the scope and system under test, including configuration, samples used, and personalized mDL data set used for the certification.
- Section 2 provides details on the test devices, test tools, test scope, test execution steps and the test time frame followed during the certification.
- Section 3 provides details on the high-level test results and detailed test scope and test results.

- Section 4 provides detailed test results.
- Appendix A.1 lists the Implementation Conformance Statement that is filled by the customer and
  was used to generate the applicable test cases for the certification.
- Appendix A.2 provides an overview of the samples used during the certification testing.

### 1.3 REFERENCE DOCUMENTS

The following documents have been referenced for the Functional Certification testing of the product:

| Ref | Title                          | Author  | Status | Version       | Receipt Date   |
|-----|--------------------------------|---------|--------|---------------|----------------|
| [1] | ISO/IEC 18013-5: 2021          | ISO/IEC | Final  | First edition | September 2021 |
| [2] | UL mDL Test Case Specification | UL      | Draft  | 7-10          | ·•             |

Table 1: Reference Documents

### 1.4 SYSTEM UNDER TEST

#### 1.4.1 IDENTIFICATION

The mDL application under test is identified as follows:

| Application owner              | HID Global                       |
|--------------------------------|----------------------------------|
| Operating System               | Android                          |
| Application name and version   | goID Starter App Version 1.0.2.5 |
| Date of receipt of application | 2023-08-17                       |

Table 2 Identification of mDL Application under test

HID Global developed this mDL Application using a Software Development Kit (SDK) provided by HID Global. This SDK is identified as follows:

| SDK Owner             | HID Global  |
|-----------------------|---|
| Operating System      | Android   |
| SDK Name and Version  | goid-core-sdk-android-release-PI_3.23_R_2.2.1         |
| SHA-256 hash over SDK | 682b566b9bb7eaaf674074b13be98231e856142e39f05db8e3492 |
|                       | 236f812a00b   |

Table 3 Identification of mDL Application under test

Please refer to section 3.2 for more information.

#### 1.4.2 CONFIGURATION

The mDL Application under test was configured to support the ISO/IEC 18013-5:2021 features as declared by HID Global in the Implementation Conformance Statement (ICS) in Appendix A.1.

#### 1.4.3 NUMBER OF SAMPLES

HID Global provided UL with 1 test sample. The sample used for testing is identified in Appendix A.2.

#### 1.4.4 MATERIALS RECEIVED FROM THE CLIENT

UL has referenced the following materials received from HID Global for testing activities.

| Reference | Materials             | Purpose                               | Receipt Date |
|-----------|-----------------------|---------------------------------------|--------------|
| 1         | IACA root certificate | To test Security Mechanism test cases | 2023-07-07   |

Table 4: Materials received from the client.

### 1.5 UL eID TECHNOLOGY CERTIFICATION BODY LOCATION

The UL Certification Body (CB) operating under the eID Technology scheme is located at the address below.

UL VS INC. 1945 The Exchange, Suite 200 SE, Atlanta, GA 30339 United States

# 1.6 UL CERTIFICATION TESTING LOCATION

UL certification testing activities were performed at the following location by the UL CB staff operating under the eID Technology certification scheme:

UL VS INC. 1945 The Exchange, Suite 200 SE, Atlanta, GA 30339 United States

### 1.7 CUSTOMER CONTACT DETAILS

This document is the official test report for the following customer:

| Customer Name          | HID Global  |
|------------------------|---|
| Customer Contact       | Fabrice Jogand-Coulomb                            |
| Customer Contact Email | Fabrice.jogandcoulomb@hidglobal.com               |
| Customer Address       | 31 Rue de Verdun, Suresnes, lles de France, 92150 |

Table 5: Customer contact details

#### 1.8 UL CONTACT DETAILS

| Test Analyst Name  | Jerrin Thomas        |  |
|--------------------|----------------------|--|
| Test Analyst Email | Jerrin.Thomas@ul.com |  |
| Lab Lead Name      | Same as above        |  |
| Lab Lead Email     | Same as above        |  |

Table 6: UL contact details

#### 1.9 DISCLAIMER

The test results in this report are valid for the mDL application name and version mentioned in section 1.4.1 when configured as described in section 1.4.2. HID Global provided all of the application software for testing by UL and is responsible for the configuration of all samples provided, as well as for the correctness of the data listed in Appendices A.1 and A.2.

The correct functioning of an mDL application is dependent on several factors in its operational environment, including but not limited to the availability and proper function of the supported technologies by the mobile device on which the application is installed, network connectivity, ISO/IEC 18013-5:2021 conformant behaviour of the mDL reader it interacts with, and availability of a correctly structured, ISO / IEC 18013-5:2021 conformant mDL data set provisioned by the Issuing Authority or its agent.

HID Global is solely and fully responsible for the conformity of all products to all applicable standards, specifications, and requirements.

### 2 TEST METHODOLOGY

#### 2.1 TEST DEVICES

The mDL application under test was installed on the following mobile devices for testing. All test cases were executed with the application running on both devices.

| Device            | OS and version |
|-------------------|----------------|
| Google Pixel 6a   | Android 13     |
| Samsung Galaxy S9 | Android 10     |

Table 7 Test devices and OS versions used for certification testing.

### 2.2 TEST TOOLS

This mDL application certification testing was conducted using the following version of the UL mDL Test Tool, which consists of the UL mDL Test Suite and the UL mDL Test App.

| Test Tool               | Version                                     |
|-------------------------|---|
| UL mDL Test Suite       | UL mDL Application Test Suite v1.2.3        |
| UL mDL Test App         | mdltestapp-1.2.1.apk                        |
| Test Case Specification | UL mDL Test Case Specification <sup>1</sup> |

Table 8 Tools used for testing.

### 2.3 TEST SCOPE

The test scope for certification includes all test cases in the UL mDL Test Case Specification. However, many of these test cases are conditional and must only be executed if the mDL Application under test supports one of the optional features of ISO/IEC 18013-5:2021. To determine which test cases to execute, UL used the Implementation Conformance Statement provided by HID Global, which is reproduced in Appendix A.1.

Section 4 contains an overview of all test cases, specifying the test result (Pass / Fail / Not Applicable / Inconclusive) for each.

Status: Final 10/40 Version: 1.0

<sup>&</sup>lt;sup>1</sup> In the absence of a published version of ISO/IEC 18013-6, the official test standard for ISO/IEC 18013-5, UL is keeping the mDL Test Case Specification identical to the latest draft of ISO/IEC 18013-6 available within the responsible ISO Working Group.

#### 2.4 TEST EXECUTION

During test execution, qualified UL Test Analysts:

- 1) Installed the mDL application under test on each of the test devices specified in section 2.1.
- 2) In collaboration with HID Global, ensured that the mDL Application was correctly configured.
- 3) Entered the configuration of the mDL application under test in the UL mDL Application Test Suite, according to the Implementation Conformance Statement (ICS) provided by HID Global.
- 4) Loaded the root certificate(s) and all applicable end-entity certificate(s) for relevant security mechanisms in the UL mDL Application Test Suite.
- 5) Executed all applicable test cases in the UL mDL Application Test Suite, using the associated UL mDL Test App to interact with the mDL application under test, as installed on each of the test devices, while also performing the required user interaction with the mDL application under test.
- 6) Analyzed the test results of each test case.
- 7) Reported the final test results in the UL mDL Application Certification Test Report.

### 2.5 TEST TIMEFRAME

The mDL application goID Starter App Version 1.0.2.5 was received from HID Global on 2023-08-17. Testing this version took place from 2023-08-17 to 2023-08-22 using the test devices identified in 2.1.

# 3 HIGH-LEVEL TEST RESULTS

#### 3.1 OVERVIEW

Table 9 shows a summary of test results for the golD Starter App Version 1.0.2.5 mDL Application on all devices used for testing.

| Device            | OS         | Pass | Fail | Not        | Total |
|-------------------|------------|------|------|------------|-------|
|                   | Version    |      |      | Applicable |       |
| Google Pixel 6a   | Android 13 | 225  | 0    | 234        | 459   |
| Samsung Galaxy S9 | Android 9  | 225  | 0    | 234        | 459   |

Table 9: High-level test results

For the goID Starter App Version 1.0.2.5 application as installed on the specified test devices, all applicable test cases were performed successfully and passed. The functional behaviour of the goID Starter App Version 1.0.2.5 application, as observed in the test environment, is conformant to ISO / IEC 18013-5:2021.

Section 4 contains a full overview of the test result of all test cases.

### 3.2 ONLINE AUDIT ON HID MDL APPLICATION SDK BUILD PROCESS

Before the certification, HID and UL participated in an online meeting on July 7th, 2023. The goal of this meeting was for HID to demonstrate to UL how the HID SDK is developed and integrated into an mDL application, and for UL to evaluate if all functions of the resulting application related to ISO/IEC 18013-5 are implemented within HID's SDK. Moreover, UL wanted to evaluate whether HID uses a managed and well-defined process for updating, releasing and versioning the SDK.

During the meeting, HID provided an overview of the system architecture and explained what functions are provided by the different components of the system. HID then went on explain how these components are managed, updated, and released. Next, HID discussed how to use SDK to create an mDL application, including demonstrating the API that the SDK provides. HID also showed how a developer can use this API to control the functions provided by the SDK. Finally, HID demonstrated the source code interface which sits between the SDK and any mDL Application which would be developed using the SDK.

After seeing parts of the source code, witnessing the build process, and discussing with the HID developers and experts, UL is confident that the SDK indeed provides all Android ISO/IEC 18013-5-related functions of an mDL application that is based on the SDK. Moreover, UL determined that HID indeed uses a managed and well-defined process for updating, releasing and versioning the SDK.

Status: Final 12/40 Version: 1.0

# 4 DETAILED TEST RESULTS

# 4.1 DATA MODEL TEST CASES

#### 4.1.1 DATA MODEL

| Test                        | Verdict | Paragraph |
|-----------------------------|---------|-----------|
| mDL_DM_FamilyName_01        |         |           |
| mDL_DM_FamilyName_02        |         |           |
| mDL_DM_FamilyName_03        |         |           |
| mDL_DM_GivenName_01         |         |           |

# **5 AUTHORIZATION**

### 5.1 REPORT VALIDITY

This report is valid for one year from the date of issuance of the current version of the application. If HID Global chooses to update the application to a new version, this certification does not apply to the new version/s. This certification also does not apply to previous versions of the application that were not tested and certified.

This report was prepared by the evaluation staff for the project:

Name: Jerrin Jose Thomas

Title: Test Analyst Date: 2023-08-22

#### 5.2 AUTHORIZATION

This report has been reviewed, confirmed, and authorized by the UL eID Technology Certification Scheme Technical Lead

Name: David Bakker Title: Technical Lead Date: 2023-08-31

Signature:

Status: Final 29/40 Version: 1.0

# **A.1** IMPLEMENTATION CONFORMANCE STATEMENT FOR HID GLOBAL

The Implementation Conformance Statements below were provided to UL by HID Global and have been used to determine which test cases to execute, in accordance with[1] and [2].

The ICS version used by HID Global is 1.7.

#### A.1.1 GENERAL INFORMATION

| mDL Owner General Information |                                     |  |

| the document   | <ul> <li>iso.org.dod.internet.private.enterprise.hid.golD.sdk.data.1</li> <li>org.aamva.18013.5.1</li> <li>org.iso.18013.5.1.aamva</li> </ul> |

<sup>&</sup>lt;sup>2</sup> For functional certification, the mDL data set can be a sample data set that the mDL owner would like to personalize onto the mDL.

Status: Final 30/40 Version: 1.0

Integrated product certification requires the mDL data set to be prepared and personalized by an Issuer System of Record (SoR) and the mDL data set shall be a representative of the mDL that will be used in production.

```
All mandatory data elements +:
For each namespace different from
the mDL namespace
("org.iso.18013.5.1"), please specify
                                       "iso.org.dod.internet.private.enterprise.hid.goID.sdk.data.1":[
the identifiers of all data elements
                                       "objectDataJSON",
present in the document
                                       "objectIssuerJson"
                                       ],
                                       "org.aamva.18013.5.1":[
                                       "real_id"
                                       ],

| 46. | mDL supports BLE version 4.2 (or above) and LE Data Packet Length Extension               | ⊠YES |
|     |   | □NO  |
| 47. | mDL supports device retrieval using BLE in mdoc central client mode                       | ⊠YES |
|     |   | □NO  |
| 48. | If BLE in mdoc central client mode is used for device retrieval, mdoc verifies the value  | □YES |
|     | of the Ident characteristic   | ⊠NO  |
| 49. | mDL supports the L2CAP transmission profile if it is acting as the GATT client for device | □YES |
|     | retrieval using BLE   | ⊠NO  |
| 50. | mDL supports device retrieval using BLE in mdoc peripheral server mode                    | □YES |
|     |   | ⊠NO  |
| 51. | mDL supports the L2CAP transmission profile if it is acting as the GATT server for        | □YES |
|     | device retrieval using BLE  | ⊠NO  |
| 52. | mDL supports device retrieval using Wi-Fi Aware   | □YES |
|     |   | ⊠NO  |
| 53. | mDL supports the NCS-PK-2WDH-128 cipher suite for Wi-Fi Aware <sup>5</sup>                | □YES |
|     |   | ⊠NO  |
| 54. | mDL supports server retrieval using OIDC  | □YES |
|     |   | ⊠NO  |
| 55. | mDL supports server retrieval using WebAPI  | □YES |
|     |   | ⊠NO  |
| 56. | mDL supports transferring server retrieval information in the device engagement           | □YES |
|     | structure   | ⊠NO  |

**<sup>4</sup>** Note that NFC Static Handover and NFC Negotiated Handover cannot be supported simultaneously if an mDL supports both technologies.

Status: Final 34/40 Version: 1.0

<sup>5</sup> Only applicable in case the mdoc supports Wi-Fi Aware for device retrieval and supports NFC Negotiated Handover for device engagement.

| 57. | mDL implements a time-out for the time between sending device engagement data       | ⊠YES |
|-----|---|------|
|     | and receiving the session establishment message                                     | □NO  |
| 58. | If yes, how many seconds is the time-out period for session termination implemented | N/A  |
|     | by the mDL?   |      |

### **A.1.4** FOR SECURITY MECHANISM TESTS

|     |   | ⊠ NO              |

Status: Final 35/40 Version: 1.0

**<sup>6</sup>** If the mDL supports multiple curves for session establishment, then for the purpose of testing, the mDL owner should provide a separate sample for each of the curves supported.

<sup>7</sup> If multiple documents are present on the mDL, the issuing authority can in theory use a different curve for signing the MSO on each of them. However, please note that UL expects the same curve is used for all documents on a given sample. For the purpose of testing, the mDL owner should provide a separate sample for each of the curves supported.

| 64. | If yes, which curves does the mDL support for mdoc MAC     | ☐ Curve P-256     |

Status: Final 36/40 Version: 1.0

<sup>8</sup> If multiple documents are present on the mDL, the mDL can in theory use a different mdoc MAC authentication curve for each of them. However, please note that UL expects the same curve is used for all documents on a given sample. For the purpose of testing, the mDL owner should provide a separate sample for each of the curves supported.

<sup>9</sup> Note that for each document on an mDL, there could potentially be multiple SDeviceKey pairs for mdoc authentication, each in a separate MSO. It is therefore theoretically possible that a single document uses MAC authentication and ECDSA/EdDSA authentication alternatingly or uses different curves for ECDSA/EdDSA alternatingly. However, please note that UL expects that the same mdoc authentication mechanism (either MAC or ECDSA/EdDSA) is consistently used for all documents on a given sample. Moreover, UL expects that the same ECDSA/EdDSA curve is used for all documents on a given sample. For the purpose of testing, the mDL owner should provide a separate sample for each of the curves supported. 10 UL assumes that all mDL samples provided to us will support all of the mdoc reader authentication curves selected (provided that the correct CA certificates are installed).

| 69. | If yes, does the mdoc show an error message to the mdoc holder if reader authentication fails?   | NA          |
|-----|--|-------------|
| 70. | If yes, are there any of data elements that the mdoc will not release if reader authentication fails? If so, please list them all by namespace and identifier. <sup>11</sup> | □YES<br>⊠NO |
| 71. | If yes, mdoc supports retrieving OCSP information, if available, when verifying a mdoc reader authentication certificate.  | □YES<br>⊠NO |
| 72. | A test CRL for all IACA root certificates provided by the customer is available during testing   | □YES<br>⊠NO |
| 73. | A test CRL for all Document Signer certificates used by the mdoc is available during testing   | □YES<br>⊠NO |

### A.1.5 FOR USE CASE TESTS

| #  | ICS statements for Use Case test cases  |      |
|----|---|------|
| 74 | The mDL allows the mDL holder to refuse consent for sharing the portrait, while | ⊠YES |
|    | allowing the sharing of other data elements requested in the same request       | □NO  |

Status: Final 37/40 Version: 1.0

<sup>11</sup> UL assumes that if mdoc reader authentication is supported, there is at least one data element that will not be released if mdoc reader authentication is not performed or fails.

# A.2 OVERVIEW OF SAMPLES USED FOR TESTING

### A.2.1 Overview

To fully test the HID Global's Android-based mDL application, UL used 1 samples which is goID Starter App Version 1.0.2.5. The table below detail how HID Global personalized these samples.

# A.2.2 Sample HID Global\_Android\_01

| Sample Identification        |                                  |
|------------------------------|----------------------------------|
| Application name and version | goID Starter App Version 1.0.2.5 |
| Sample Identification Number | HID Global_Android_01            |
| Date of Receipt of Sample    | 2023-08-17                       |

| Sample ID                                      | HID Global_Android_01                           |
